ÇEŞME ENVIRONMENTAL INFORMATION

Yatak Island: The depth goes down up to 40 meters in this island and it is famous for the magnificent underwater cavern located at approximately 8-10 meters depth. This island is generally preferred for the final diving activity of the day. The two caverns located to the west of the island are extreme ly suitable for photographers shooting macro and broad angle photographs with the carousal of colors formed by the entrance of the caves and the sponges within the caverns. when you enter the cave with a broad angle lens and face outwards, the turquoise colored blue in front of the darkness will fascinate you.

Eşek Island: Although there are numerous other diving spots around the island, the split rock spot is considered the most beautiful location of the island. The depth reaches down to 50 - 60 meters. Particularly the eastern wall starting at around 20 meters and reaching to 40 meters is a place every diver will live to see.

Ildırı Bay: The cavern reef in this region, which was a forbidden zone until last year is the most significant and beautiful diving spot. At the westem side of the shallow zone, there is awall extending from South to North for almost 70 meters. The depth of this wall, with upper part around 8 meters to the surface reaches down to 35 meters from 12 meters. There are three interconnected caverns around 21 meter depth an done of these caverns has an exit spot at approximately 12 meters, just in the middle of shallowzone.
